

Student Performance Analysis Dashboard

1. Problem Statement

Educational institutions maintain attendance and marks data in spreadsheets. Monitoring student performance manually is time-consuming and error-prone.

A centralized dashboard is required to identify high-performing and at-risk students.

2. Objective

Develop a dashboard that helps faculty:

- Monitor attendance
 - Analyze student marks
 - Identify weak-performing students
 - Compare subject performance
-

3. Software Required

- Microsoft Power BI Desktop
 - Excel Files
-

4. Dataset Required

Student Table

Field Name

Student ID

Student Name

Gender

Department

Semester

Marks Table

Field Name

Student ID

Subject

Marks

Maximum Marks

Attendance Table

Field Name

Student ID

Attendance %

5. DAX Measures

- Average Marks
 - Attendance %
 - Pass Percentage
 - Subject-wise Average
-

6. Dashboard Pages

Student Overview

- Total Students
- Average Attendance
- Average Marks

Performance Analysis

- Subject-wise Performance
- Top Performers

Attendance Analysis

- Attendance by Department

- Low Attendance Students
-

7. Expected Outcome

Faculty can identify:

- Students needing intervention
 - Subject-wise strengths and weaknesses
 - Attendance trends
-

Team Distribution (3 Students)

Student 1

- Data Collection
- Data Import
- Power Query Cleaning

Student 2

- Data Modeling
- Relationship Creation
- DAX Measures

Student 3

- Dashboard Design
- Visualizations
- Report Publishing and Documentation
